

## LIGHTING & APPLIANCE CONTROL

**Never come home to a dark house again!**

**Problem:** You've just come home from an evening out and the house is completely dark.

**Solution:** Simple press a button on the keyfob to turn on your outside lights. Press the button again to switch the lights off again. With remote control lighting, you'll never again come home to a dark house

## Radio System for Domestic Application

Turn your lights on as you're walking up the driveway -- even in the rain! Put a Keyfob Controller in your most-used coat pockets to give you easy access to your remote, or add to your key chain! Also, make sure each family member carries a Keyfob, providing them with the security and convenience of turning on/off lights from outside the home!

The system can be used as a stand-alone radio controller or in conjunction with the DEA automation system where the spare button on the gate keyfob can be used to switch on driveway lights, etc. There are a number of models depending on channel numbers, required transmission range and operating voltage.
